

FOR STEEP ROOFS

SDA-35

Steep roof anchor point

SDA-35 from INNOTECH is suitable as a single anchor point for inclined and steep roofs. SDA-35 requires a small wood dimension, and due to its subtle appearance it blends in nicely

with the building's optics. SDA-35 intervenes extremely gently into the construction and is suitable for brick, plain, and slate roofing. The easy installation is an additional time-safer.

- single anchor point for steep roofs
- quick and easy installation
- High-quality stainless steel

- useable for many different roof substructures
- Certified according to the latest state of the art

EN 795:2012 TYPE A
